

Pearlcomb® Air Diffuser

Pearlcomb® Air Diffuser

The Pearlcomb® diffuser has been proven in hundreds of installations to be a fine bubble diffuser that requires infrequent cleaning, while maintaining the higher oxygen transfer efficiencies expected from a fine bubble diffuser.

These characteristics have been met through the unique technology used to produce the Pearlcomb diffuser. The diffuser tube is made up of minute resin spheres which have been fused together under pressure. This construction provides a highly uniform, porous material which lends itself for use as an excellent diffuser media.

The Pearlcomb diffuser may be mounted on any header manifold having $\frac{3}{4}$ " threaded bosses. Installation is convenient since the diffuser is lightweight and non-abrasive. Pearlcomb diffusers are available in either simplex or duplex continuations.

SIEMENS

The information provided in this brochure contains merely general descriptions or characteristics of performance which in actual case of use do not always apply as described or which may change as a result of further development of the products. An obligation to provide the respective characteristics shall only exist if expressly agreed in the terms of the contract.
