

API and DAF systems are just two in a family of wastewater treatment products for oily waste applications. You can trust Siemens Water Technologies professionals to help make sure your plant runs as efficiently and effectively as possible.

For immediate information about how the ETT Reliability program can benefit you, contact Don Silloway at 800.826.1838 or 715.359.7211 or e-mail donald.silloway@siemens.com.

Siemens Water Technologies is a worldwide leader in water and wastewater treatment with solutions for every step of the water cycle. We have answers for water treatment, plant automation, electrical systems, building technology as well as design and planning, commissioning, financing, maintenance, emergency support and modernization.

Reliability program for API & DAF equipment

Evaluate, Train and Troubleshoot

Water Technologies

SIEMENS

API and DAF systems are extremely important for wastewater treatment.

They are also often misunderstood and can cause significant frustration for plant operators.

This unique, site-specific reliability program improves the process and increases the mechanical reliability of these systems and your plant by providing on-site training and resources based on your own equipment.

This innovative new program coupled with the training DVD and electronic manual, ensures that your equipment functions properly even if you experience changes in operators or section supervisors.

Evaluation

In this first step, professionals from Siemens Water Technologies work with you to conduct API and DAF inspections at your location to evaluate the process and mechanical reliability of your wastewater treatment system.

Training

After the evaluation, we'll conduct and videotape both classroom and hands-on training. This tape will be edited as necessary and converted to DVD for your training library.

In addition to providing an opportunity for employees to refresh their knowledge, this resource will be available to provide the same in-depth training to individuals joining your staff. The result is access to the same source of information and the same high-quality training for all employees.

Troubleshooting

The final stage of this customized program is a digital troubleshooting guide. The guide includes digital photographs of your equipment with notes about adjustments and specific instructions that may be required for each component.

In addition, we offer an electronic operations and maintenance manual, also based on the specific equipment at your site.

Siemens Water Technologies is a leader in API and DAF equipment.

Our innovative Evaluate, Train and Troubleshoot (ETT) Reliability program gives you access to our expertise every day.

This new program is a professional and efficient tool to help you and your staff:

- Better understand your API and DAF equipment
- Improve the operation and reduce unscheduled maintenance at your wastewater treatment plant

The customized ETT Reliability program includes:

- On-site evaluation
- On-site classroom and hands-on training
- Digital troubleshooting guide with photos of your equipment
- DVD and electronic training manual for the actual operation of your site's specific equipment
