

Replacement Modules for CDI/CEDI Systems

Because of the many advantages of the CDI-LX Series, the LX Series systems have replaced the H- and P-Series CDI systems. For existing installations where customers want to re-order the same series modules, H- and P-Series replacement modules can still be ordered.

Because of the cost savings and benefits associated with the LX Series, many existing P-180 customers are upgrading to the LX Series and a complete upgrade kit is available. The kit is specifically designed to replace the P-180 modules with minimal field retrofit labor required. The upgrade kit includes simplified connections to match the existing P-180 connections. Some of the benefits of upgrading include:

- Offers the latest generation of CEDI technology
- Offers a robust design for superior performance with the highest reliability in the industry
- Guarantees leak-free operation
- Uses the existing skid/footprint, power supplies, instruments and controls

As most customers have chosen to upgrade, the P-180 replacement modules will be available for a limited time only.
